Distance interns will secure rotation sites for the Administrative (Foodservice Management), Clinical and Community rotations. LRU-specific rotation paperwork (MOA, preceptor and facility forms) will be provided once the intern has matched with our program. All rotations are full-time (40 hours/week). Rotation lengths and requirements are described below:

**Administrative (Foodservice Management) Rotation**

The administrative rotation is 6 weeks total. It is focused on food service management and is typically completed in the hospital where the inpatient clinical rotation is completed, or within the child nutrition services department of a school district. Other acceptable locations would be the foodservice departments of a long-term care/rehab facility or a university foodservice.

The Administrative preceptor does not have to be a RD if s/he has the appropriate education, training and experience to oversee the rotation. For example, sometimes the food service manager is a Certified Dietary Manager (CDM).

Please do not plan more than 1 location for the administrative rotation.

**Clinical Rotation**

The clinical rotation is 12 weeks total. A minimum of 8 weeks must be scheduled in a hospital (inpatient acute care). The hospital should have a daily patient census of at least 100 and should have at least 2 full-time RDs on staff.

If less than 12 weeks are spent in the hospital, the remaining weeks should be spent in long-term care and/or outpatient clinical nutrition settings (for example a dialysis center, medical clinic with outpatient RD services or a diabetes teaching facility). All clinical rotations must have a full-time RD as preceptor. The outpatient clinical experiences should be planned to occur before the inpatient clinical experiences, if possible.

Do not plan more than 2 locations for the clinical rotation.

**Community Rotation**

The community rotation is 10 weeks total. It is required that each intern receive some experience working with low income, nutritionally at-risk pregnant and postpartum (breastfeeding and non-breastfeeding) women, infants and children up to age 5. For that reason, we recommend that each intern plan a portion of their community rotation in a local WIC program if possible.

In addition to a WIC clinic, locations to consider for the community rotation can include health departments, Extension Services, community or employee wellness programs, and food banks or homeless shelters that provide nutrition education to clients.
While it is recommended for the community preceptor to be an RD, it is not required if the preceptor has the appropriate education/experience to oversee the rotation (for example, a WIC nutritionist might have an undergraduate degree in nutrition and WIC training/experience).

Interns typically will complete their community rotation at 1-2 locations. Do not plan more than 2 locations for the community rotation.
